Profile

My time in San Francisco came about a bit over 4 years ago with a job offer at Macy's Inc. I was immediately given the opportunity to develop front facing technology for this exciting company that leads in consumer retail. I made it! That's honestly how I've been feeling since I started my job. Working in a big company has led to being assigned to a variety of projects and working alongside great teams. I still enjoy my work, but I also understand that new journeys await, and that other opportunities will make for more stimulating experiences. That is why you are reading this document and the reason for my interest in working with you.

Experience

Software Engineer, Macy's Inc. San Francisco, CA – Aug 2015–Present

- * Full stack web development for the single page mobile web app, m.macys.com
